

AUREON CLOUD BACKUP & DISASTER RECOVERY

Rest assured knowing that your entire IT infrastructure is backed up, protected, and ready to be quickly redeployed, if needed.

Disruptions large or small—due to hardware failure, human error, software malfunctions, natural disasters, computer viruses, etc.—can threaten the reputation of even the most secure organization. With the Aureon Cloud Backup and Disaster Recovery solution, all hardware, software applications, networking infrastructure, and security systems are housed in secure, SOC 2 compliant data centers, owned and managed by Aureon™ Technology. This means you can focus on building your reputation with great customer service, instead of restoring your reputation after a disruption.

BUSINESS-SPECIFIC SOLUTIONS

With the Aureon Cloud Backup and Disaster Recovery solution, our processing capacity, servers, and storage area networks (SAN) are specifically designed and scaled to replicate your IT infrastructure, data, and systems storage. In a disaster recovery event, we meet all of your computer needs and compliance requirements for small and large businesses in our disaster recovery environment. We can even replicate your core business-specific processing systems, creating a warm disaster recovery site solution.

Aureon Cloud Backup & Disaster Recovery features:

- Standard or custom retention schedules to meet client needs.
- Managed monitoring and client premise appliance maintenance.
- Alerts when problems are identified.
- One no-charge basic restore a month, with additional restores available for a minimal fee.
- Backup agent upgrades to Microsoft® Windows®, SQL™, Exchange™, if required.
- Options to meet critical recovery time objectives.

We can also deploy and manage a second data center as a disaster recovery center for replicating and vetting our primary locations.
